## CONFIRMATION BY PANEL OF EXAMINERS

I certify that a Panel of Examiners has met on 2<sup>nd</sup> December 2015 to conduct the final examination of Nurul Karimah Zolkepali on her Master of Science thesis entitled “Formation of Encapsulated Mefenamic Acid-Beta Cyclodextrin and Unencapsulate Mefenamic Acid using Electrospray Technique” in accordance with Universiti Teknologi Mara Act 1976 (Akta 173). The panel of Examiners recommends that the student be awarded the relevant degree. The panel of Examiners was as follows:

Ruzitah Mohd Salleh  
Associate Professor Dr  
Faculty of Chemical Engineering  
Universiti Teknologi MARA  
(Chairperson)

Ibtisam Abdul Wahab  
Senior Lecturer Dr  
Faculty of Pharmacy  
Universiti Teknologi MARA  
(Internal Examiner)

Siti Masrinda Tasirin  
Associate Professor Dr  
Faculty of Engineering & Built Environment  
Universiti Kebangsaan Malaysia  
(External Examiner)

**SITI HALIJJAH SHARIFF, PhD**

Associate Professor  
Dean

Institute of Graduate studies  
Universiti Teknologi MARA

Date: 19 January 2016

## AUTHOR'S DECLARATION

I declare that the work in this thesis was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and the result of my own work, unless otherwise indicated or acknowledged as reference works. This thesis has not been submitted to any other academic institution or non-academic institution for any degree or qualification.

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research.

Name of student : Nurul Karimah binti Zolkepali

Student ID. No : 2012210652

Programme : Master of Science (Chemical Engineering by Research)

Faculty : Chemical Engineering

Thesis title : Formation of encapsulated mefenamic acid-beta cyclodextrin and unencapsulated mefenamic acid using electrospray technique

Signature of student :  \_\_\_\_\_

Date : 19 January 2016

## ABSTRACT

The potential of using electrostatic atomizer or electrospray in producing fine and encapsulated particle of Mefenamic Acid (MA) form I with  $\beta$ -cyclodextrin ( $\beta$ CD) was demonstrated in this study. Encapsulated MA- $\beta$ CD with a molar ratio of 1:2 was prepared in water-ethanol suspension, followed by the electrospray process to atomize the droplet into fine dried particles. The working distance (WD) between the electrospray needle tip and the substrate were varied from 15 to 25 cm. Using FE-SEM and ImageJ software, the sizes of encapsulated MA- $\beta$ CD particles were found to decrease from  $91\pm 26$  to  $42\pm 35$  nm as the WD increased. The dissolution rate of encapsulated particles of MA- $\beta$ CD was found to be higher compared to the particles of as-received MA and the unencapsulated MA. The presence of the encapsulated MA- $\beta$ CD was proven by the DSC result with the disappearance of MA peak after the atomization process. The XRD and FTIR analysis showed that the encapsulation occurred with the existence of new solid phase that was expected from the interaction between MA and  $\beta$ CD at  $11.30^\circ$ ,  $17.60^\circ$ ,  $18.18^\circ$ ,  $20.36^\circ$ ,  $31.32^\circ$  ( $2\theta$ ) and the appearance of C=C at wavelength  $1513\text{ cm}^{-1}$  to  $1642.26\text{ cm}^{-1}$ . Further analysis by TEM showed the size and morphology of MA-  $\beta$ CD particles when immersed in water and acetone. Encapsulated MA- $\beta$ CD particles were solubilized in water but suspended as a spherical shape in acetone.
